

EMERGENCY RESPONSE

POWERED BY BRIDGERA IOT

Knowing the exact location of a loved one, remote worker, client, or patient when they are in need of emergency assistance can mean the difference between life and death. Whether indoors or outdoors, Bridgera's Emergency Response solution provides a platform to facilitate the connection between a subscriber initiating a call for help and a monitoring service receiving a dashboard alert, voice call, subscriber information, and their real-time geolocation that can then be used to quickly dispatch the appropriate emergency service.

Bridgera IoT for Emergency Response is a perfect complement for monitoring service providers operating call centers. Monitoring service subscribers are afforded an extra layer of security by knowing that they can be found anywhere without having to communicate a location to an operator. The solution can be made compatible with the service providers portfolio of emergency devices and call center software. Bridgera also offers a device alternative by leveraging the Bridgera Rescue App which turns a smartphone into an emergency call and location device.

Bridgera IoT is software-as-a-service for connecting devices, processing data, and enabling unique applications. Bridgera IoT for Emergency Response is white-labeled as a vertical solution for monitoring service providers, giving them the opportunity to offer a personalized user experience with flexible device options.

Connect Any Device

Call Center Integration

Customize Applications

START WITH BRIDGERA IOT

For a sturdy foundation, *Bridgera IoT* comes loaded with the fundamentals:

- A subscription service on a fault-tolerant platform
- Connect any device with push and pull interaction
- Adapt to any network protocol
- Aggregate and process data in real time at any scale
- Push notifications through email, SMS, or a dashboard
- Cloud hosted with 24x7 help desk and security controls

LEVERAGE OFF-THE-SHELF IOT CAPABILITIES

Bridgera IoT has a portfolio of IoT capability ready for deployment:

- Find/Track location indoors and outdoors
- Plot locations to maps
- Establish geofences
- Detect movement, velocity, and acceleration
- Device provisioning and remote diagnostics
- Emergency alerts
- Report sensor readings

BUILT TO SPEC ENTERPRISE SOLUTIONS

It is impossible to thrive with 'off the shelf' technologies. *Emergency Monitoring* solutions come ready to deploy or can be personalized by *Bridgera* to meet your unique business requirements:

- Custom processing rules enabled for each use case
- Custom APIs for enterprise integration and alternative data feeds
- Custom analytics, reports, and dynamic dashboarding capabilities
- Custom role based portals for user, admin, and operations with mobile and web access

ONGOING SUPPORT AND INNOVATION

As a business evolves, so does its challenges. *Bridgera* stays engaged after implementation to host, support, and maintain the solution. But more importantly, *Bridgera* will provide value added development support to evolve the IoT solution as you identify new use cases and devices for continuous improvement of your operations. All without the need for internal software developers.
