

ASSET MONITORING

POWERED BY BRIDGERA IOT

Where is it? When will it arrive? Why is it late? How many do I have? Was there a breach? Enterprises are moving assets of all ranges of value from box to shelf, storage to service, service to shipping, shipping dock to customer, the list is endless. Knowing the exact location and state of an asset at any given time, while in motion and in retrospect can reduce inventory risk, operational costs, and provide a better customer experience.

Bridgera IoT for Asset Monitoring provides an enterprise software solution that supports all of your asset monitoring solutions under one common cloud platform. Asset and inventory track and trace, indoor and outdoor, within a confined space and without geographic limits. We have you covered.

Each company has unique requirements and conditions for asset monitoring. Bridgera IoT is a perfect complement to a device strategy and enables an organization to specify a software solution that matches their specific use case demands.

Bridgera IoT is software-as-a-service for connecting devices, processing data, and enabling unique applications. A white-labeled solution developed to spec and supported for life, providing the flexibility of DIY without the risk or cost of hiring software developers.

Track Anything Anywhere

Inside The
Warehouse

At The
Loading Dock

On The
Road

On The
Sea

In The
Air

START WITH BRIDGERA IOT

For a sturdy foundation, *Bridgera IoT* comes loaded with the fundamentals:

- A subscription service on a fault-tolerant platform
- Connect any device with push and pull interaction
- Adapt to any network protocol
- Aggregate and process data in real time at any scale
- Push notifications through email, SMS, or a dashboard
- Cloud hosted with 24x7 help desk and security controls

LEVERAGE OFF-THE-SHELF IOT CAPABILITIES

Bridgera IoT has a portfolio of IoT capability ready for deployment:

- Find/Track location indoors and outdoors
- Establish geofences
- Monitor velocity and acceleration
- Device provisioning and remote diagnostics
- Emergency alerts
- Report sensor readings

BUILT TO SPEC ENTERPRISE SOLUTIONS

It is impossible to thrive with 'off the shelf' technologies. An *Asset Monitoring* solution can be built to your specification atop *Bridgera IoT* within two to four months:

- Custom processing rules enabled for each use case
- Custom APIs for enterprise integration and alternative data feeds
- Custom analytics, reports, and dynamic dashboarding capabilities
- Custom role based portals for user, admin, and operations with mobile and web access

ONGOING SUPPORT AND INNOVATION

As a business evolves, so does its challenges. Bridgera stays engaged after implementation to host, support, and maintain the solution. But more importantly, Bridgera will provide value added development support to evolve the IoT solution as you identify new use cases and devices for continuous improvement of your operations. All without the need for internal software developers.
