Remember when cars were completely mechanical? Today, cars are being released with more than 50 million lines of code to operate every aspect of the car. This trend of digitization has penetrated most industries. Companies are putting more and more sensors on their products, however, many are isolating the data to the source instead of connecting multiple devices to create a web of intelligence.

Bridgera IoT for Remote Monitoring provides an enterprise software solution that connects to any internet enabled device. Connecting your device allows you to remotely monitor and control your equipment. Bridgera IoT for Remote Monitoring captures the device data, processes in motion or aggregates data for batch processing, then provides real-time status and feedback on actual operational performance. The monitoring possibilities include production volumes, maintenance requirements, field service performance, customer behavior, and much more.

Bridgera IoT is software-as-a-service for connecting devices, processing data, and enabling unique applications. A white-labeled solution developed to spec and supported for life, providing the flexibility of DIY without the risk or cost of hiring software developers.
START WITH BRIDGERA IOT

For a sturdy foundation, Bridgera IoT comes loaded with the fundamentals:

• A subscription service on a fault-tolerant platform
• Connect any device with push and pull interaction
• Adapt to any network protocol
• Aggregate and process data in real time at any scale
• Push notifications through email, SMS, or a dashboard
• Cloud hosted with 24x7 help desk and security controls

LEVERAGE OFF-THE-SHELF IoT FEATURES

Bridgera IoT has a portfolio of IoT features and capability ready for deployment:

• Find / Track location indoors and outdoors
• Establish geofences
• Monitor velocity and acceleration
• Device provisioning and remote diagnostics
• Emergency alerts
• Sensor readings

BUILT TO SPEC ENTERPRISE SOLUTIONS

It is impossible to thrive with ‘off the shelf’ technologies. Remote Monitoring is built to your specification atop Bridgera IoT with live custom solutions in two to four months:

• Custom processing rules enabled for each use case
• Custom APIs for enterprise integration and alternative data feeds
• Custom analytics, reports, and dynamic dashboarding capabilities
• Custom portals for user, admin, and operations with mobile and web access

ONGOING SUPPORT AND INNOVATION

As a business evolves, so does its challenges. Bridgera stays engaged after implementation to host, support, and maintain the solution. But more importantly, Bridgera will provide value added development support to evolve the IoT solution as you identify new use cases and devices for continuous improvement of your operations. All without the need for internal developers.
